

Dry type early KABOCHA, rich pollen and fruits

PRIMERA ACE

Very tasty with dry and fluffy texture

【Feature】

1. Large fruits around 1.8kg, good semi-round shape with dark skin.
2. Early KABOCHA ready to harvest in 40~45 days after mating.
3. Rich pollen and stable fruits setting even in the cool season. Many female flowers will bring you good harvests.
4. Thick flesh and fluffy texture. Melty and tasty.
5. Middle size leaves with short leafstalk. Less chance of broken nor lain leaves against wind.
6. Fruits skin can be very hard in the shelf for a month or longer.

【Planting advice】

1. Supply nitrogen fertilizer 12~13kg/10a.
2. Keep plant vigor rather stronger for setting more fruits.
3. Keep enough plant vigor before setting fruits. Recommend to set fruits about 70cm from the main branch.
4. If the plant vigor getting weaker in the later stage, it could affect the quality. Keep supplying enough fertilizer.

【Typical Planting】
