

Large early KABOCHA, quick ready to deliver

PRIMERA VISTA

Powerful growth!
Early KABOCHA with
easy management.

【Feature】

1. Good round shape in 1.8~2.0kg. Easy polishing with less ridges.
2. In the open field, can harvest large fruits in 40~45 days after mating.
3. With rich pollen and female flowers, good and stable harvest.
4. Middle-large leaves with short leafstalk. Less chance of broken nor lain leaves against wind.
5. Thick flesh with dry-creamy texture. Ready to delivery with a week curing after harvesting.

【Planting advice】

1. Planting in the coldest season could occur weaker vigor, so we recommend to plant in regular season.
2. Supply nitrogen fertilizer 12~13kg/10a. Add a little more in the coldest period.
3. Keep plant vigor stronger for setting more fruits.
4. Keep enough plant vigor before setting fruits. Better to set about 70cm from the main branch.
5. This early KABOCHA can shorten the planting period in regular season planting, so no need to start sowing in the cold season.

【Typical Planting】
