

KABOCHA of short internodes, easy harvesting! Brilliant flesh color, best for sale in cutting

Tasty semi-early
KABOCHA
Hopeful new face

Primera 117

Features

1. Large fruits more than 1.8kg, good semi-round shape and thick flesh. Unity shape with deep green skin. Good appearance.
2. Semi-early KABOCHA ready to harvest in 40~45 days after mating. Dry and fluffy texture. Good conversion into sugar makes sweet and tasty KABOCHA.
3. Strong leafstalk, less lain leaves against wind. Less labor for harvesting with short internodes.
4. Will have female flowers near the main branch. High ratio of setting fruits will bring rich harvests.
5. High adaptability for various planting. House, Tunnel, Open field, Control cultivation etc.
