

Incredible yield and storability

MARRON STAR157

【Feature】

- Large fruits variety with easy planting as PRIMERA115, adding more yield and longer storability.
- Compact plant with short leafstalk. Less lain leaves against wind. Good to have large fruits both in forcing and late raising cultivation.
- Powerful growth to have large fruits with 2.0~2.5kg. Less ridges and flat skin in deep green color, with less pale on storing.
- Standard maturing KABOCHA ready to harvest in 53~55 days after mating. Thick flesh, best for selling in cut piece.
- Fluffy texture, very tasty. Slow scarification type, so can be stored in long term for 2~3 months. Texture is fluffy and dry just after harvesting, and will become melty and creamy with enough scarification after long storing.

【Planting advice】

Supply nitrogen fertilizer 10~12kg/10a.

Have female flowers stably and good to set fruits about 50cm from the main branch.
